

# EMPOWERING WATER WARRIORS

with WaterApp

## Resort in Goa

### ISSUES FACED

- Resort is operated by the local caretaker. Owner lives in Mumbai and has very little window into what's happening.
- All water needs are met by the dug well on the premises.
- In summer time, the **well** level is **low and unpredictable**.
- As it is close to the beach, guests shower often and the **overhead tank suddenly runs dry** which is inconvenient.
- Owner wants to build a fruit garden and additional rooms but does not know if water requirements will be met by the well.

### HOW DID WATERAPP HELP?

- Owner is able to monitor water usage and know resort occupancy from Mumbai.
- The **water in the well has become visible**.
  - Helps to **pump efficiently** (maximize recovery rate)
  - Water issues in summers have become manageable
- The manager receives water alerts in advance so he can take timely actions to ensure **uninterrupted supply to guests**.
- Owner is very happy with WaterApp as he has clear visibility of water and can plan accordingly.

### WATER CONFIGURATION

OVERHEAD - 2

DUG WELL - 1
